

Dr. Karl Robinson M. D.

"New and unusual facets of some of the polychrests."

All homeopaths learn certain key aspects of the important homeopathic medicines known as polychrests. This basic knowledge is fundamental. However, there are other aspects of these great medicines that are less familiar. Drawing on the experience of Dr. Prafull Vijayakar in India, and Karl-Josef Muller of Germany, as well as his own experience, Dr. Robinson will present lesser known aspects of these medicines which are equally valid and can lead to the correct prescription. It can be difficult to recognize a polychrest if we only know one side or aspect of it. Dr. Robinson will broaden and enrich our knowledge of a few of the well-known polychrests. You will not want to miss the opportunity to hear these clinical treasures from around the world.

Dr. Robinson has been practicing homeopathy for over 35 years and has studied homeopathy around the world. He received his B.A. from Yale University and his M.D. from Hahnemann Medical College in Philadelphia. After completing a residency in internal medicine, he studied homeopathy at the National Center for Homeopathy and at the Royal Homeopathic Hospital in London. He has studied extensively over the years with leading homeopaths from Greece, Germany, Belgium, Holland, England, South America, Canada and India.

Dr. Robinson teaches and writes about homeopathy and maintains medical practices in Houston and Albuquerque. He is the former editor of the American Journal of Homeopathy published by the American Institute of Homeopathy. He is the founder and president of the New Mexico School of Classical Homeopathy and founder, along with Melvyn Smith M.D., and past president of the Texas Society of Homeopathy. He recently completed his new book called "Small Doses, Big Results."

His school, Homeopathy of the Americas, has been teaching homeopathy in San Salvador and Guatemala for the last ten years. Recently, the school began day long health camps specializing in treating difficult cases in poor areas.
