

4.2.2.1 Do Nothing

This alternative has no additional costs but fecal contamination and unsightly floatable wastes in the Inner Harbor will not be reduced. We believe this is unacceptable.

4.2.2.2 Wastewater Management

This could be implemented for minimal costs. It should include educational materials and training for all dischargers. Property owners should be advised how to properly maintain their septic tanks—and an arrangement for services should be arranged. Paul Weltzin, owner and operator of the *M/V Lite Weight*, is willing to provide this service. He currently backhauls septage for Gustavus and charges \$300 per 1,000 gallons for this hauling. Details for disposal would need to be arranged with a pumper, such as Don Burford of R&S Pumping or Sloan Swendsen of Juneau Septic Services, both in Juneau. They may also have good ideas about how to get portable septage pumping equipment to Elfin Cove.
